Authorization for Use of Materials and Participation in Research

Helipad Detector Project

Authorizing Party:

Pedro Vyctor Almeida, co-author of the original annotated dataset and author of the "exp1" run of the Helipad Detector project.

Researcher:

Fabiana Rotella Campaner, applicant to the Master's and Doctoral Programs of the Graduate Program in Intelligence Technologies and Digital Design (TIDD), PUC-SP, Admissions Process 1/2027.

São Paulo, SP, Brazil
October 15, 2026

1. Purpose

The authorizing party authorizes the researcher to use, in the master's research project "Evaluation of visual detectors without ground truth: data lineage and human review in helipad detection in satellite imagery of São Paulo" and in publications arising from it, the materials he authored within the project: (a) the annotated dataset of the Roboflow project my-first-project-kfo4l, in all its versions; (b) the notebooks, weights, results, and configurations of the "exp1" run and the contents of the ppvyctor/Helipoint-Detector repository.

2. Attribution and License

The authorizing party will always receive authorship credit, indicating that he annotated the original dataset and carried out exp1. This authorization does not alter the license indicated on the dataset's public page (CC BY 4.0).

3. Participation as a Reviewer

The authorizing party agrees to participate voluntarily as the second reviewer in the sample-based human review study provided for in the preliminary research proposal, following the written protocol (independent review, blinded to the model's confidence, the source experiment, and the stratum). He acknowledges that, because he annotated the training dataset, he is not independent of the project, and that this limitation will be disclosed in the results.

4. Limitations on Use

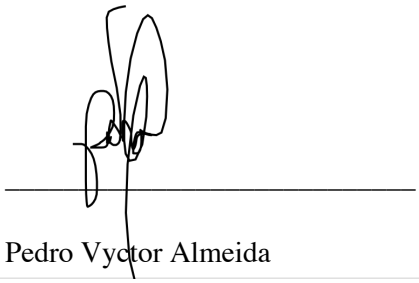

Use is restricted to academic research. Every output will be described as: "Automated image-based visual detection, subject to errors and not equivalent to operational, legal, safety, or aeronautical validation." No result will be presented as validation of a helipad or of its operation, safety, or authorization.

5. Revocation

This authorization may be revoked at any time by written notice from the authorizing party to the researcher. Revocation applies to future uses and does not require the removal of material already published, except as required by law.

6. Publication of This Authorization

The authorizing party agrees that this authorization may be published in the project repository and cited in the preliminary research proposal. This authorization contains no identity document details, addresses, or telephone numbers, and none should be added.

Place and date: São Paulo, SP, Brazil, October 15, 2026

Alternative: Confirmation by Message

If signing is not possible, the authorizing party may reply by email or messaging application using the text below. The researcher will save the reply as a PDF (without a telephone number or personal data) alongside this authorization, recording the date and the communication channel through which it was received.

“I, Pedro Vyctor Almeida, confirm that I have read the Authorization for Use of Materials and Participation in Research (Helipad Detector Project) and agree to all its provisions, including participation as the second reviewer.”
